- ☐ Other:

In Applicant's response it is indicated that the embodiment claiming the screen that the screen is in the gap. Such an arrangement was not how the examiner read the claims. A gap is normally an open space, e.g. would not include any structure such as a screen. The claims that included the screen were thought to include a screen followed by a gap. This does not appear to be the case. Accordingly, the following restriction requirement is made:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 13-17 drawn to a two vessel system for treating pulp having an outlet directly connected to the first vessel, classified in Class 162, subclass 242.

II. Claims 18-22 drawn to a two vessel system for treating pulp having a gap between the conduit and transition, classified in Class 162, subclass 246.

III. Claim 23 drawn to a two vessel system for treating pulp having a screen surrounding the second vessel, classified in Class 162, subclass 246.

The inventions are distinct and independent, each from the other because of the following reasons:

Group I does not gap or screen of Groups II and III. Group II does not require the direct connection or screen Groups I and III. Group III does not require the direct connection or gap of Groups I and II.

Because these inventions are distinct and independent for the reasons given above and have required a separate status in the art as shown by their different classification restriction for examination purposes as indicated is proper.

It is noted that claims 18-22 would be given **favorable consideration** if the term "gap" was amended to "open gap".
